

# Customized API synthesis project service

Custom synthesis is one of our three core businesses. Our R&D team is led by a PhD who has more than ten years of experience in organic synthesis, and has formed an echelon R&D team composed of PhD, master and undergraduate, which can provide customers with comprehensive chemical customization services.

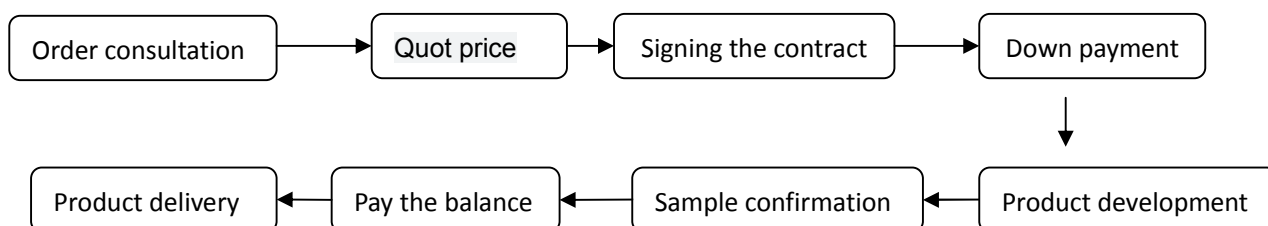

## 1、 CRO service content

design and verification of new compound structures, synthetic routes, and cost reduction through optimization of synthetic routes and processes. Advantageous product areas: organic synthetic building blocks; acid, amine, borate, chiral compounds, halides and heterocyclic products; spiro ring system products.

## 2、 CRO service model

Product delivery mode: including final product delivery, data report. In addition to the agreement, relevant data will be provided, including nuclear magnetic analysis, high performance liquid chromatography, mass spectrometry, gas chromatography, etc.

## 3、 CRO Service Process

## 4、 Intellectual Property

Before the start of the experiment, we have signed confidentiality agreements with customers and employees, and strictly follow the terms of the confidentiality agreement to provide services such as literature search, synthesis route design, synthesis, and analysis. During the non-disclosure agreement, all kinds of customer information are protected to the greatest extent.

## 5、 Equipment
