SECO C-NUCLEOSIDE ANALOGS OF THE 1,2,4-TRIAZOLE

El Sayed H. El Ashry* and Laila F. Awad

Chemistry Department, Faculty of Science,
Alexandria University, Alexandria, Egypt

ABSTRACT

The *seco* C-nucleosides 3-(1,2,3,4,5-penta-O-acetyl-D-glucitol-1-yl)-1*H*-1,2,4-triazoles (**6** and **7**) were obtained in one pot by deamination and dethiolation of 4-amino-3-(D-glucitol- and D-galactitol-1-yl)-5-mercapto-1,2,4-triazoles (**1** and **2**), respectively, using sodium nitrite in orthophosphoric acid and subsequent acetylation. The structures were confirmed by using ^1H , ^{13}C and 2D NMR spectra, DQF-COSY, HMQC and HMBC experiments. The favored conformational structures were deduced from the vicinal coupling constants of the protons.

The biological activity of naturally occurring C-nucleosides has stimulated extensive research for the synthesis of their analogues (1–3). Some acyclic C-nucleosides of the 1,2,4-triazole have potential biological activities as antiviral, herbicides, fungicides or insecticides. A part of our ongoing research program has been devoted to the synthesis of acyclic N- and C-nucleosides (4,5). Thus, a novel synthesis of acyclic C-nucleosides of the 1,2,4-triazole is the subject of this work. The synthesis has been achieved by reaction of 3-(D-alditol-1-yl)-4-amino-5-mercapto-1,2,4-triazole (**4**) (**1,2**) at 0°C with sodium nitrite in orthophosphoric acid followed by neutralization with sodium hydroxide. The products of the triazole type **4** and **5** have been obtained which could be isolated upon acetylation with acetic anhydride in pyridine whereby the respective crystalline products **6** and **7** were obtained in 52 and 48% yield, respectively.

*Corresponding author.

In order to establish that the formation of 3-substituted-1*H*-1,2,4-triazole from 4-amino-5-mercapto-3-substituted-1,2,4-triazole has taken place via the diazotization step and not under the condition of acetylation, the model compound 4-amino-5-mercapto-3-methyl-1,2,4-triazole (**3**) was diazotized under the same reaction conditions whereby it gave **8** which was identical with an authentic sample.
