Z. Naturforsch. 2011, 66b, 577-584; received March 25, 2011

Transamination between the ketonic Mannich bases 1a, b and primary arylamines gave a series of ketonic *sec*-Mannich bases 2a-h. A variety of tetrahydro-1,2,4-triazepines 3a-f have been synthesized by treating the arylhydrazones of 2 with formaldehyde. A similar reaction with the benzenesulfonylhydrazone of 2b afforded 4. The 3-styryl-2*H*-1,2,4-triazepine 5 was obtained from the phenylhydrazone of 2a and cinnamaldehyde. Treatment of arylhydrazones of the 4-methoxystyryl keto base 7 with formaldehyde and cinnamaldehyde afforded the 3,4,5,6-tetrahydro-2*H*-1,2,4-triazepines 8a, b. Mannich reaction with 4-(*p*-hydroxyphenyl)-tetrahydro-1,2,4-triazepine 3d afforded the Mannich bases 9, 10 and 11.

The reaction of 1b with *o*-phenylenediamine leads to the 1,5-benzodiazepine 13. The new tetrahydro-1,4-diazepine and tetrahydro-1,5-diazocine Mannich bases 15 and 17 were obtained from 1band ethylenediamine or 1,3-diaminopropane, respectively. The bi(piperidine) derivative 19 was obtained from 1a and 1,3-diaminopropane.

Key words: Mannich Bases, 1,2,4-Triazepines, 1,4-Diazepines, 1,5-Diazocines

# Introduction

Mannich bases have been used extensively in the synthesis of heterocyclic systems [1-6] and of heterocycles having a potential basic side chain of alkaloidal nature [7-13]. In particular, ketonic tert-Mannich bases and their quaternary salts have been employed frequently as potential intermediates in the synthesis of a multitude of heterocycles of pharmaceutical interest, such as pyrazolines [9-11], pyridines [3], piperidines [14-16], 1,5-benzo- or 1,5-hetero-diazepines [16-19], and quinolines [20]. The use of sec-Mannich bases as synthetic intermediates has been reported in a limited number of cases for the synthesis of pyrimidines [21], quinolines [22, 23] and isoquinolines [24, 25], and recently we reported [16] the synthesis of the 2H-1,2,4-triazepine ring system starting with ketonic sec-amine bases.

In connection with our studies in the area of Mannich bases [4, 11-13, 16, 26] and in view of the widespread and increasing interest in the chemistry and biological activities of Mannich bases and related compounds, the synthetic potential of ketonic *sec*-Mannich bases as intermediates in heterocyclic synthesis was further investigated. We report here on the synthesis of some new functionalized tetrahydro-1,2,4-triazepines, tetrahydro-1,4-diazepines, tetrahydro-1,5-diazocines, and bi(piperidines), which possess considerable synthetic and pharmaceutical interest.

# **Results and Discussion**

A series of ketonic *sec*-Mannich bases  $2\mathbf{a} - \mathbf{h}$  was prepared by transamination reaction between the ketonic *tert*-Mannich base hydrochloride  $1\mathbf{a}$  or  $1\mathbf{b}$  and the appropriate primary aromatic amine, according to an earlier report [27]. Compounds  $2\mathbf{f} - \mathbf{h}$  have been reported for the first time by this study. It was found that treatment of the ketonic *sec*-amines of the type 2with *p*-nitrophenylhydrazine or phenylhydrazine, and subsequently with formaldehyde under mild conditions, afforded a series of 3,4,5,6-tetrahydro-2,4,7-triaryl-2*H*-1,2,4-triazepines ( $3\mathbf{a} - \mathbf{f}$ ) with different substituents on the 1,2,4-triazepine ring (Scheme 1).

In line with this, the 2-benzenesulfonyl-tetrahydro-1,2,4-triazepine derivative **4** was obtained by treating **2b** with benzenesulfonyl hydrazide and formaldehyde. The synthesis of the 3-styryl-tetrahydro-1,2,4triazepine **5** was achieved by treating the phenylhydrazone of **2a** with cinnamaldehyde. A practical advantage of the reactions leading to the 3,4,5,6-tetrahydro-2*H*-1,2,4-triazepine derivatives **3**-**5** is that it is

0932-0776 / 11 / 0600-0577 \$ 06.00 © 2011 Verlag der Zeitschrift für Naturforschung, Tübingen · http://znaturforsch.com

Scheme 1.

often unnecessary to isolate the arylhydrazone intermediates of the ketonic *sec*-Mannich bases. The mass and <sup>1</sup>H NMR spectra of compounds **3**–**5** are consistent with their structures. The main characteristic features of the <sup>1</sup>H NMR spectrum of **3a** are a singlet at  $\delta = 5.35$  assignable to 3-H<sub>2</sub> and two triplets at  $\delta =$ 3.65 (5-H<sub>2</sub>) and 3.38 (6-H<sub>2</sub>), and a singlet at  $\delta =$  2.33 (Ar-CH<sub>3</sub>). The mass spectra of **3a**–**f**, **4** and **5** contain peaks of the respective molecular ions, and fragmentation patterns which supported their structures. As an example the fragmentation pattern of **3c** is depicted in Scheme 2.

The scope of the above reaction has been broadened by treatment of the arylhydrazones derived from 1-(p-anisyl)-5-(p-tolylamino)-1-penten-3-one (7) with formaldehyde or cinnamaldehyde to afford 7-(4-methoxystyryl)-tetrahydro-2-phenyl-4-(*p*-tolyl)-2*H*-1,2,4-tiazepine (**8a**) and 7-(4-methoxystyryl)-3-styryl-tetrahydro-2*H*-1,2,4-triazepine (**8b**), re-

spectively (Scheme 3). The analytical and spectral data of **8a** and **8b** are consistent with their structures.

The Mannich reaction of the 4-(p-hydroxyphenyl)tetrahydro-2H-1,2,4-triazepine (**3d**) is of particular interest, because it provides access to tetrahydro-2H-1,2,4-triazepines having a phenolic Mannich base as a structural unit. This has been achieved by treating **3d** with dimethylamine or piperidine and formaldehyde to

Scheme 3.

Scheme 4.

give the mono-(Mannich base) **9** or the bis-(Mannich bases) **10** and **11** depending on the molar ratio of the reactants (Scheme 4).

The structures of compounds 9-11 are supported by analytical and spectral data. The <sup>1</sup>H NMR specrum of 9 displays four singlets at  $\delta = 2.38$  (NMe<sub>2</sub>), 3.67 (Ar-CH<sub>2</sub>N), 5.17 (3-H<sub>2</sub>), and 6.71 (ArOH), and two triplets at  $\delta = 3.62$  (5-H<sub>2</sub>) and 3.34 (6-H<sub>2</sub>). The mass spectra of 9, 10 and 11 revealed molecular ion peaks at m/z = 400, 458 [M+1]<sup>+</sup> and 537, respectively, and fragmentation patterns which supported their structures.

In connection with the present study, the transamination reaction between **1b** and *o*-phenylenediamine afforded the 2,3-dihydro-4-(p-hydroxyphenyl)-1*H*-1,5-benzodiazepine **13**. It is believed that the initially formed intermediate **12** readily undergoes cyclodehydration to give **13**, as confirmed by analytical and spectral data (Scheme 5).

On the other hand, the reaction of **1b** with ethylenediamine led to the formation of 2,3,6,7-tetrahydro-1- $(\beta$ -4-hydroxybenzoylethyl)-5-(4-hydroxyphenyl)-1*H*-1,4-diazepine (**15**) rather than the tetrahydro-1,4-diazepine **14**, which would be the expected product. Obviously, **15** was formed *via* the intermediacy of the non-isolable tetrahydro-1,4-diazepine **14**, resulting from the cyclocondensation reaction of ethylenediamine with **1b**, which readily reacts further with a second molecule of **1b** *via* transamination to afford the new Mannich base **15**. The reaction of **1b** with 1,3diaminopropane proceeded quite analogously to afford 3,4,7,8-tetrahydro-1-( $\beta$ -4-hydroxybenzoylethyl)-6-(4-hydroxyphenyl)-2*H*-1,5-diazocine (**17**). The reaction of **1b** with ethylenediamine and 1,3-diaminopropane is of particular interest, because it offers access with good yields to the new tetrahydro-1,4-diazepine and tetrahydro-1,5-diazocine Mannich bases **15** and **17**, respectively.

The mass spectrum of **17** exhibited a molecular ion peak at m/z = 352 [M]<sup>+</sup> and a peak at m/z = 110due to the tetrahydro-1,5-diazocine unit. The side chain can be identified by two peaks at m/z = 121 and 149 (Scheme 6). The formation of **15** and **17** is in line with our recent report [16] on the reaction of bis-ketonic Mannich bases with ethylenediamine.

On the other hand, the reaction of 1a with 1,3-diaminopropane in a molar ratio of 4:1 takes a different course. The reaction proceeded smoothly to

Scheme 5.

Scheme 6.

give 1,3-bis(3-benzoyl-4-hydroxy-4-phenylpiperidin-1-yl)propane (**19**), *via* the intermediacy of *N*,*N*,*N'*,*N'*tetra( $\beta$ -benzoylethyl)-1,3-diaminopropane (**18**), which undergoes intramolecular aldolization to give **19** as the end product. The identity of the product as the bi-(piperidinol) **19**, and not the isomeric tetraketo base **18**, was shown by the IR spectrum which displayed a strong OH band at 3421 cm<sup>-1</sup> as well as the absorption band at 1629 cm<sup>-1</sup> for C=O. The tendency of primary alkyl amines to undergo double *N*-alkylation with ketonic Mannich bases, and subsequent aldolization of the resulting bis-(ketonic Mannich bases) to *N*-alkyl piperidinols, has been previously reported [14–16]. Attempts to isolate the intermediate tetraketo base **18** were unsuccessful due to the ease with which such bases undergo aldolization even at r. t.

# **Experimental Section**

All melting points (uncorrected) were determined on a Gallenkamp electric melting point apparatus. Elemental microanalyses were carried out at the Microanalytical Unit, Faculty of Science, Cairo University. Infrared spectra were measured on a Mattson 5000 FTIR spectrometer. <sup>1</sup>H and <sup>13</sup>C NMR data were obtained in CDCl<sub>3</sub> or [D<sub>6</sub>]DMSO solution on a Varian XL 200 MHz instrument using TMS as internal standard. Chemical shifts are reported in ppm ( $\delta$ ) downfield from internal TMS. Mass spectra were recorded on a GC-MS QP-1000 EX Shimadzu instrument. The course of the reaction and the purity of the synthesized compounds were monitored by TLC using EM science silica gel-coated plates with visualization by irradiation with an ultraviolet lamp. Compounds 3f, 8b, 17, and 19 are of limited solubility in common <sup>1</sup>H NMR solvents. Compounds **1b** [28], 2a-d [27], 2c and e [16], 3d [16], and 6 [9] were prepared as previously described.

#### $\beta$ -Arylaminopropiophenones 2f - h

A mixture of **1a** (2.13 g, 10 mmol) or **1b** (2.29 g, 10 mmol) and the appropriate amine (10 mmol) in

50% aqueous ethanol (80 mL) was refluxed for 90 min. The product obtained on cooling was filtered and crystallized from ethanol to give 2f - h.

#### 4-(3-Oxo-3-phenylpropylamino)benzamide (2f)

M. p. 198 °C. Yield 75 % (colorless crystals). – IR (KBr): v = 3399 (NH), 3360 (CONH), 1666 (CO), 1592, 1388, 1326, 1060 cm<sup>-1</sup>. – <sup>1</sup>H NMR (CDCl<sub>3</sub>):  $\delta = 2.46$  (t, 2H, COCH<sub>2</sub>CH<sub>2</sub>N), 3.31 (t, 2H, COCH<sub>2</sub>CH<sub>2</sub>N), 4.40 (s, 1H, ArNH), 7.19–7.73 (m, 9H, aromatic), 8.11 (br. s, 2H, CONH<sub>2</sub>). – MS (EI, 70 eV): m/z (%) = 268 (18) [M]<sup>+</sup>, 267 (2) [M–1]<sup>+</sup>, 149 (100) [CH<sub>2</sub>NH-C<sub>6</sub>H<sub>4</sub>-CONH<sub>2</sub>]<sup>+</sup>, 136 (7), 133 (3), 132 (12), 120 (11), 105 (37), 77 (32). – C<sub>16</sub>H<sub>16</sub>N<sub>2</sub>O<sub>2</sub> (268.31): calcd. #### 1-(p-Anisyl)-5-(p-tolylamino)-1-penten-3-one (7)

A mixture of **6** (2.15 g, 8 mmol) and *p*-toluidine (0.85 g, 8 mmol) in 50% aqueous ethanol (80 mL) was refluxed for 90 min. The product obtained on cooling was filtered and crystallized from ethanol to give **6**. M. p. 110 °C. Yield 85% (yellow crystals). – IR (KBr): v = 3382 (NH), 1653 (CO), 1605, 1557, 1460, 1319, 1209, 1105, 868 cm<sup>-1</sup>. – <sup>1</sup>H NMR (CDCl<sub>3</sub>):  $\delta = 2.24$  (s, 3H, Ar*Me*), 2.96 (t, 2H, COC*H*<sub>2</sub>CH<sub>2</sub>N), 3.52 (t, 2H, COCH<sub>2</sub>C*H*<sub>2</sub>N), 3.52 (s, 3H *OMe*), 6.64 (s, 1H, ArN*H*), 6.59 (d, 2H, Ar-CH=C*H*-CO), 6.93 (d, 2H, Ar-C*H*=CH-CO), 7.12–7.58 (m, 8H, aromatic). – C<sub>19</sub>H<sub>21</sub>NO<sub>2</sub> (295.38): calcd. C 77.26, H 7.17, N 4.74; found C 77.18, H 7.10, N 4.69.

# 7-(4-Methoxystyryl)-3,4,5,6-tetrahydro-2-phenyl-4-p-tolyl-2H-1,2,4-triazepine (**8a**)

This compound was obtained from equimolar amounts of 6, phenylhydrazine and formaldehyde (5 mmol) in ethanol (40 mL), following the procedure described for the synthesis of 3a-f. The product was crystallized from ethanol to give 8a. M. p. 184 °C. Yield 55 % (yellow crystals). - IR (KBr): v = 1617 (C=N), 1597, 1489, 1308, 1229, 1114, 1082, 847 cm<sup>-1</sup>. – <sup>1</sup>H NMR (CDCl<sub>3</sub>):  $\delta$  = 2.28 (s, 3H, ArMe), 3.42 (t, 2H, 6-H<sub>2</sub>), 3.60 (s, 3H, OMe), 3.94 (t, 2H, 5-H<sub>2</sub>), 4.58 (s, 2H, 3-H<sub>2</sub>), 6.89 (d, 2H, Ar-CH=CH-), 6.96 (d, 2H, Ar-CH=CH-), 7.02-7.33 (m, 8H, aromatic). – <sup>13</sup>C NMR (CDCl<sub>3</sub>):  $\delta$  = 22.11 (Me), 32.18 (C-6), 48.44 (C-5), 54.23 (OMe), 79.89 (C-3), 113.33, 114.28, 116.88, 127.14, 129.44, 130.10, 136.47 (Ar-CH=CH), 138.33 (Ar-CH=CH), 142.63, 146.41, 156.10, 158.31 (all Ar-C), 154.77 (C-7). – C<sub>26</sub>H<sub>27</sub>N<sub>3</sub>O (397.51): calcd. C 78.56, H 6.85, N 10.57; found C 78.50, H 6.77, N 10.49.

### 7-(4-Methoxystyryl)-3,4,5,6-tetrahydro-2-(4-nitrophenyl)3styryl-4-p-tolyl-2H-1,2,4-triazepine (**8b**)

This compound was obtained from equimolar amounts of **6**, *p*-nitrophenylhydrazine and cinnamaldehyde (5 mmol) in ethanol (80 mL), in the manner described for the synthesis of **3a** – **f**. The product obtained was filtered and washed with boiling ethanol (3 × 15 mL) to give **8b**. M. p. 265 °C. Yield 33 % (yellow powder). – IR (KBr): v = 1622 (C=N), 1588, 1459, 1326, 1232, 1119, 1066, 865 cm<sup>-1</sup>. – MS (EI, 70 eV): m/z (%) = 530 (46) [M–Me]<sup>+</sup>, 213 (67), 134 (52), 107 (6), 103 (61), 98 (70) [triazepine unit]<sup>+</sup>, 84 (100) [triazepine unit–(CH<sub>2</sub>)]<sup>+</sup>. – C<sub>34</sub>H<sub>32</sub>N<sub>4</sub>O<sub>3</sub> (544.64): calcd. C 74.98, H 5.92, N 10.29; found C 74.91, H 5.89, N 10.21.

# 2-(Dimethylaminomethyl)-4-(2,3,5,6-tetrahydro-2,7diphenyl-1,2,4-triazepin-4-yl)phenol (9)

A solution of 3d [16] (1.37 g, 4 mmol), formalin (37 %, 0.4 mL, 5 mmol) and dimethylamine (40%, 0.56 mL, 5 mmol) in ethanol (50 mL) was refluxed for 6 h. After standing at r.t. for 24 h, the product obtained was filtered and crystallized from ethanol to give 9. M.p. 145 °C. -Yield 72 % (colorless crystals). – IR (KBr): v = 3373 (OH), 1605 (C=N), 1588, 1454, 1371, 1271, 1113, 1073 cm<sup>-1</sup>. – <sup>1</sup>H NMR (CDCl<sub>3</sub>):  $\delta = 2.38$  (s, 6H, N(*Me*)<sub>2</sub>), 3.33 (t, 2H, 6-H<sub>2</sub>), 3.60 (t, 2H, 5-H<sub>2</sub>), 3.67 (s, 2H, CH<sub>2</sub>N), 5.17 (s, 2H, 3-H<sub>2</sub>), 12.01 (s, 1H, OH), 6.88-7.85 (m, 13H, aromatic). -<sup>13</sup>C NMR (CDCl<sub>3</sub>):  $\delta$  = 30.98 (C-6), 44.21 (C-5), 46.61 (NMe), 62.44 (CH<sub>2</sub>N), 74.89 (C-3), 115.32, 117.12, 118.89, 119.42, 120.54, 126.11, 126.29, 128.29, 128.56, 128.84, 139.42, 141.74, 148.33, (all Ar-C), 152.09 (C-7). - MS (EI, 70 eV): m/z (%) = 400 (4) [M]<sup>+</sup>, 401 (1) [M+1]<sup>+</sup>, 250 (59) [M-(C<sub>6</sub>H<sub>3</sub>-OH+CH<sub>2</sub>Me<sub>2</sub>)]<sup>+</sup>, 251 (13), 93 (7), 77 (100), 58 (15)  $[CH_2NMe_2]^+$ . –  $C_{25}H_{28}N_4O$  (400.52): calcd. C 74.97, H 7.05, N 13.99; found C 74.91, H 6.97, N 13.90.

# 2,6-Bis-(dimethylaminomethyl)-4-(2,3,5,6-tetrahydro-2,7diphenyl-1,2,4-triazepin-4-yl)phenol (10)

*Procedure A:* This compound was obtained from equimolar amounts of **9**, formalin and dimethylamine (5 mmol) in ethanol (50 mL), following the procedure described for the synthesis of **9**. The product was crystallized from ethanol to give **10**. M. p. 190 °C. Yield 55 % (colorless crystals). – IR (KBr): *v* = 3370 (OH), 1612 (C=N), 1577, 1446, 1335, 1221, 1108, 1079 cm<sup>-1</sup>. – <sup>1</sup>H NMR (CDCl<sub>3</sub>): δ = 2.30 (s, 12H, 2× *NMe*<sub>2</sub>), 3.34 (t, 2H, 6-*H*<sub>2</sub>), 3.96 (t, 2H, 5-*H*<sub>2</sub>), 4.17 (s, 4H, 2× *CH*<sub>2</sub>N), 5.31 (s, 2H, 3-*H*<sub>2</sub>), 12.11 (s, 1H, *OH*), 6.94 – 7.75 (m, 12H, aromatic). – MS (EI, 70 eV): *m/z* (%) = 457 (6) [M]<sup>+</sup>, 456 (18) [M–1]<sup>+</sup>, 370 (6), 222 (40), 233 (27), 248 (10), 263 (100) [M–(Ph=N-NPh)]<sup>+</sup>, 264 (75), 104 (23), 77 (19), 57 (34). – C<sub>28</sub>H<sub>35</sub>N<sub>5</sub>O (457.61): calcd. C 73.49, H 7.71, N 15.30; found C 73.41, H 7.69, N 15.22.

*Procedure B:* A solution of **3d** (1.37 g, 4 mmol), formalin (37 %, 0.8 mL, 10 mmol) and dimethylamine (40 %, 1.12 mL, 10 mmol) in ethanol (50 mL) was refluxed for 8 h. After standing at r. t. for 24 h, the product obtained was filtered and crystallized from ethanol to give **10**. M. p. 190– 192 °C. Yield 60 %. The structure was confirmed by a comparison of <sup>1</sup>H NMR data, m. p. and TLC with that from Procedure A.

# 2,6-[Bis-(piperidin-1-ylmethyl)]-4-(2,3,5,6-tetrahydro-2,7diphenyl-1,2,4-triazepin-4-yl)phenol (11)

This compound was obtained from 3d (1.37 g, 4 mmol), formalin (37 %, 1 mL, 12 mmol) and piperidine (1 g, 12 mmol), following the procedure described for the syn-

thesis of 9. The product was crystallized from ethanol to give 11. M. p. 142 °C. Yield 49 % (colorless crystals). -IR (KBr): v = 3377 (OH), 1618 (C=N), 1557, 1426, 1355, 1216, 1100, 1050 cm<sup>-1</sup>. – <sup>1</sup>H NMR (CDCl<sub>3</sub>):  $\delta = 1.52$ – 1.67 [m, 12H,  $2 \times (3-H_2, 4-H_2, 5-H_2)$  of piperidine], 2.55 (m, 4H, 2-H<sub>2</sub>, 6-H<sub>2</sub> of piperidine), 3.35 (t, 2H, 6-H<sub>2</sub>), 3.60 (t, 2H, 5- $H_2$ ), 3.68 (s, 4H, 2× C $H_2$ N), 5.16 (s, 2H, 3-H<sub>2</sub>), 11.11 (s, 1H, OH), 6.85-7.86 (m, 12H, aromatic). -<sup>13</sup>C NMR (CDCl<sub>3</sub>):  $\delta$  = 23.92 (C-3, C-4, C-5 of piperidine), 25.72 (C-6), 31.21 (C-5), 46.65 (C-2, C-6 of piperidine), 53.85 (CH<sub>2</sub>N), 75.10 (C-3), 115.33, 118.82, 120.54, 126.12, 126.29, 128.28, 128.54, 128.82, 139.45, 142.45, 148.98 (all Ar-C), 150.54 (C-7). – MS (EI, 70 eV): m/z (%) = 537 (1) [M]<sup>+</sup>, 440 (61) [M–(CH<sub>2</sub>NC<sub>5</sub>H<sub>10</sub>)+H]<sup>+</sup>, 250 (100) [M–  $(C_6H_2OH(CH_2NC_5H_{10})_2]^+$ , 251 (22), 222 (16), 204 (10), 84 (4)  $[NC_5H_{10}]^+$ . -  $C_{34}H_{43}N_5O$  (537.74): calcd. C 75.94, H 8.06, N 13.02; found C 75.91, H 7.98, N 12.97.

# 2,3-Dihydro-4-(p-hydroxyphenyl)-1H-1,5-benzodiazepine (13)

A mixture of 1b (1.14 g, 5 mmol), o-phenylenediamine (0.54 g, 5 mmol) and fused sodium acetate (1.5 g) in absolute ethanol (80 mL) was refluxed for 6 h. The crystalline product was filtered and washed with boiling ethanol-acetone (1:1) to give 13. M. p. 134 °C. Yield 60% (yellow crystals). - IR (KBr): v = 3394 (OH), 3360 (NH), 1611 (C=N), 1513, 1493, 1344, 1144, 810 cm<sup>-1</sup>. – <sup>1</sup>H NMR (CDCl<sub>3</sub>):  $\delta = 3.11$  (m, 2H, 3-H<sub>2</sub>), 3.54 (m, 2H, 2-H<sub>2</sub>), 6.16 (br. s, 1H, NH), 6.84-7.83 (m, 8H, aromatic), 8.22 (br. s, 1H, OH). -<sup>13</sup>C NMR (CDCl<sub>3</sub>):  $\delta$  = 32.16 (C-3), 47.11 (C-2), 113.44, 119.20, 123.24, 127.81, 130.35, 134.45 (all Ar-C), 138.11 (C-5a), 138.55 (C-5b), 168.11 (C-4). – MS (EI, 70 eV): m/z(%) = 238 (1)  $[M]^+$ , 222 (2), 210 (4), 121 (9), 120 (100), 119 (12), 107 (31), 106 (27), 92 (19), 77 (35). - C<sub>15</sub>H<sub>14</sub>N<sub>2</sub>O (238.28): calcd. C 75.61, H 5.92, N 11.76; found C 75.55, H 5.88, N 11.69.

# 2,3,6,7-Tetrahydro-1-( $\beta$ -4-hydroxybenzoylethyl)-5-(4-hydroxybenyl)-1H-1,4-diazepine (**15**)

A mixture of **1b** (1.14 g, 5 mmol) and ethylenediamine (0.3 g, 5 mmol) in 50 % aqueous ethanol (50 mL) was re-

583

fluxed for 3 h. After standing at r. t. for 24 h, the product obtained was filtered and washed with boiling DMF-ethanol (1:1) to give **15**. M. p. 255 °C. Yield 52% (pale-yellow powder). – IR (KBr): v = 3422 (OH), 1610 (C=N), 1510, 1349, 1036, 1008, 814 cm<sup>-1</sup>. – <sup>1</sup>H NMR ([D<sub>6</sub>] DMSO):  $\delta = 2.48$  (m, 2H, 7-H<sub>2</sub>), 2.52 (m, 2H, COCH<sub>2</sub>CH<sub>2</sub>N), 2.64 (m, 2H, 2-H<sub>2</sub>), 2.96 (m, 2H, COCH<sub>2</sub>CH<sub>2</sub>N), 3.28 (m, 2H, 6-H<sub>2</sub>), 3.56 (m, 2H, 3-H<sub>2</sub>), 6.78–7.77 (m, 8H, aromatic), 10.11 (br. s, 1H, OH). – C<sub>20</sub>H<sub>22</sub>N<sub>2</sub>O<sub>3</sub> (338.40): calcd. C 70.99, H 6.55, N 8.28; found C 70.91, H 6.49, N 8.20.

# 3,4,7,8-Tetrahydro-1-( $\beta$ -4-hydroxybenzoylethyl)-6-(4-hydroxybenyl)-2H-1,5-diazocine (**17**)

This compound was obtained from equimolar amounts of **1b** and 1,3-diaminopropane (5 mmol), following the procedure described for the synthesis of **15**. The product obtained was filtered and washed with boiling DMF-ethanol (1:1) to give **17**. M. p. 260 °C. Yield 33 % (yellow powder). – IR (KBr): v = 3940 (OH), 1619 (C=N), 1479, 1407, 1336, 1217, 1102 cm<sup>-1</sup>. – MS (EI, 70 eV): m/z (%) = 352 (1) [M]<sup>+</sup>, 149 (12) [HO-C<sub>6</sub>H<sub>4</sub>-COCH<sub>2</sub>CH<sub>2</sub>]<sup>+</sup>, 121 (6), 119, 110 (7), 109 (10), 111(11), 93 (11), 85 (28), 71 (43), 69 (100) [(C<sub>4</sub>H<sub>7</sub>)N]<sup>+</sup>, 55 (69). – C<sub>21</sub>H<sub>24</sub>N<sub>2</sub>O<sub>3</sub> (352.43): calcd. C 71.57, H 6.86, N 7.95; found C 71.50, H 6.79, N 7.87.

# 1,3-Bis(3-benzoyl-4-hydroxy-4-phenylpiperidin-1-yl)propane (19)

This compound was obtained from **1a** (3.83 g, 18 mmol) and 1,3-diaminopropane (0.33 g, 4.5 mmol), following the procedure described for the synthesis of **15**. The product obtained was filtered and washed with boiling DMF-ethanol (1 : 1) to give **19**. M. p. 256 °C. Yield 71 % (colorless powder). – IR (KBr): v = 3421 (OH), 1629 (CO), 1600, 1483, 1407, 1216, 1102, 941 cm<sup>-1</sup>. – MS (EI, 70 eV): m/z (%) = 601 (58) [M–1]<sup>+</sup>, 416 (47), 275 (57), 228 (48), 206 (63), 207 (39), 185 (83), 158 (58), 110 (100), 105 (27), 98 (87), 96 (60), 77 (35). – C<sub>39</sub>H<sub>42</sub>N<sub>2</sub>O<sub>4</sub> (602.76): calcd. C 77.71, H 7.02, N 4.65; found C 77.70, H 6.98, N 4.58.
