# Synthesis, Structures of some Unsymmetrical 3,6-Disubstituted-1,2,4,5-Tetrazines

Wei-Xiao Hu\* and Feng Xu

College of Pharmaceutical Science, Zhejiang University of Technology, Hangzhou 310032, People's Republic of China \*E-mail: huyang@mail.hz.zj.cn Received September 13, 2007

A series of new unsymmetrical 3-phenyl-6-benzyl-1,2,4,5-tetrazine derivatives **10a-i** were synthesized and characterized by IR, NMR, MS, and element analysis. The structures of **4a**, **10c**, **10d** and **10h** were analyzed by X-ray crystallography, which had intermolecular C-H<sup> $\cdots$ </sup>N, C-H<sup> $\cdots$ </sup>Cl, C-H<sup> $\cdots$ </sup>Π and Π<sup> $\cdots$ </sup>Π interactions.

J. Heterocyclic Chem., 45, 1745 (2008).

# **INTRODUCTION**

Compounds containing the 1,2,4,5-tetrazine skeleton can be used as dyes [1], herbicides [2], and antibacterial [3]. In addition, recently, some 1,2,4,5-tetrazine derivatives have been found with good antitumor activity by our research team [4-8]. Although some synthesis and crystallographic studies of 1,2,4,5-tetrazine have been published [9], only a few of them referred to unsymmetrical 3,6-disubstituted-1,2,4,5-tetrazines [10], which is due to the difficulty and troublesome work in separation and purification of unsymmetrical 3,6disubstituted-1,2,4,5-tetrazines.

According to Lang's method [10a,b], the traditional way to synthesize unsymmetrical 3,6-disubstituted-1,2,4,5-tetrazines is as follows: ethyl (*p*-substituted) iminobenzoate hydrochloride 1a-d and acetamidine hydrochloride 2 were reacted with hydrazine hydrate to form dihydro-1,2,4,5-tetrazines 3a-d, a series of somewhat unstable compounds, which were then easily oxidized by sodium nitrite and acetic acid to obtain corresponding unsymmetrical 3-(substitutedphenyl)-6methyl-1,2,4,5-tetrazines 4a-d (Scheme I). However, when using this method to prepare 3-phenyl-6-benzyl-1,2,4,5-tetrazine, the yield was very low(<5%), the main product we obtained was 4-amino-3-benzyl-5-phenyl-1,2,4-trizole 6, which may have been formed by the isomerization of 3-phenyl-6-benzyl-1,4-dihydro-1,2,4,5tetrazine 5 under acid conditions [11] (Scheme II) .

In this contribution we want to report about a facile preparation of a series of new unsymmetrical 3-phenyl-6-benzyl-1,2,4,5-tetrazine derivatives.

### **RESULTS AND DISCUSSION**

**Synthesis.** The synthetic procedures of our new unsymmetrical 3-phenyl-6-benzyl-1,2,4,5-tetrazine derivatives **10a-i** are shown in scheme III. The *p*-substituted benzonitrile **7a-i** and *p*-substituted benzylcyanide **8a-i** were reacted with 85% hydrazine hydrate in the presence of sulfur powder, to initially form 3-(*p*-substituted phenyl)-6-*p*-(substitutedbenzyl)-1,4-dihydro-1,2,4,5-tetrazine **9a-i**, which were then easily oxidized by sodium nitrite and acetic acid to obtain 3-phenyl-6-benzyl-1,2,4,5-

tetrazine derivatives **10a-i**. In addition to **10a-i**, this reaction also caused other two series of products: symmetrical 3,6-disubstituted phenyl-1,2,4,5-tetrazines and 3,6-disubstituted benzyl-1,2,4,5-tetrazine, which were formed by **7a-i** and **8a-i**, respectively. When the reaction performed in the absence of sulfur powder, product **10a** was not detected even when the reaction time was prolonged from 3 hours to 10 hours. When the molar ratio of **7a-8a**-sulfur was 1:1:1, the yield of **10a** was 33.8 %. By increasing the amount of sulfur power and changing the molar ratio of **7a-8a**-sulfur to 1:1:2, the yield of **10a** decreased to 28.2 %. These results showed that adding a suitable amount of sulfur power had a significant effect on the yield of **10a**.

From these results the reaction conditions we choose were **7a-i** (25 mmol), **8a-i** (25 mmol), sulfur powder (25 mmol), and 85% hydrazine hydrate (10 mL). Using this reaction system, a series of new unsymmetrical 3-phenyl-6-benzyl-1,2,4,5-tetrazine derivatives **10a-i** were synthesized. The results are summarized in Table 1. From the Table, it can be seen that, for **10a-i**, when  $R_2$  are the same, the yields increase with the enhancement of electron withdrawing ability of  $R_3$  group (Cl>H>OCH<sub>3</sub>). On the contrary, when  $R_3$  are the same, the yields decrease with the enhancement of electron withdrawing ability of  $R_2$  group (H>Cl>CF<sub>3</sub>).

Th

**Crystal structures.** The selected bond lengths and angles for compounds **4a**, **10c-d** and **10h** are given in Table 3. Parameters for data collection and refinement of **4a**, **10c-d** and **10h** are summarized in Table 4. It should be noted that, although the synthesis of **4a** have been reported [13], the crystal structure has not previously been presented. The ORTEP view of **4a** with atom numbering scheme is shown in Figure 1. It is obvious that the tetrazine ring N1-C6 (centroid Cg1), the phenyl ring C8-C13 (centroid Cg2) and the C7 atom are almost coplanar, the crystal packing (Figure 2) exhibits weak  $\Pi$ - $\Pi$  stacking interaction, proved by the short distance Cg1<sup>...</sup>Cg2<sup>i</sup> of 3.758(3)Å. [symmetry codes: (i)1-x,1-y,1-z]. The C<sup>...</sup>C distance is within the range associated with  $\Pi$ - $\Pi$  interactions [3.3-3.8 Å] [12].

Figure 1. ORTEP view of compound 4a with atom numbering scheme. Ellipsoids are drawn at the 50% probability level (arbitrary spheres for H atoms).

Figure 2. The packing diagram of compound 4a view along the a axis.

The atom-labelling schemes of compound **10c** and **10d** are shown in Figure 3. It is clear to see that **10c** and **10d** have similar crystal structure. The central tetrazine rings N1-C6 of **10c** and **10d** are almost coplanar with the phenyl rings C14-C19 and C7-C12, with the dihedral angles of  $2.46(3)^{\circ}$  and  $5.90(2)^{\circ}$ , respectively, but twisted with respect to the benzyl-phenyl rings C8-C13 and C15-C20, with the dihedral angles of  $69.40(3)^{\circ}$  and  $76.70(2)^{\circ}$ ,

Figure 3. ORTEP view of compounds 10c and 10d with atom numbering schemes. Ellipsoids are drawn at the 30% probability level (arbitrary spheres for H atoms). For 10d, only the major component of the disordered  $CF_3$  group is shown.

respectively. The central bond lengths C3-C14 in molecule **10c** and C3-C7 in molecule **10d** are 1.469(4) Å and 1.462(4) Å, respectively, which are similar to that of C3-C8 in **4a** [1.461(3)Å]. The packing diagram of **10c** is shown in Figure 4, which indicates the weak C–H---N hydrogen bonding occurs between neighboring molecules (Table 5).

**Figure 4.** The packing diagram of compound **10c** view along the b axis (the dotted line representing C-H---Cl hydrogen bonding).

The ORTEP view of **10h** with atom numbering scheme is shown in Figure 5. Compound **10h** crystallizes with two crystallographically independent molecules in the asymmetric unit that differ in the orientation of the methoxy group. In both molecules the chlorophenyl ring is almost coplanar with the central tetrazine ring, but the methoxyphenyl ring is twisted. C7-C12 and C14-C19 benzene rings make dihedral angles of  $2.32(3)^{\circ}$  and  $76.74(2)^{\circ}$ , respectively, with the central tetrazine ring N1-C6. The C27-C37 and C34-C39 benzene make dihedral angles of  $2.32(3)^{\circ}$  and  $80.47(2)^{\circ}$ , respectively, with the central tetrazine ring N21-C26.

In the crystal structure (Figure 6), a C-H---Cl hydrogen bonding is observed between the two independent molecules, pair of C-H-- $\Pi$  interactions involving the C34-C39 ring (centroid Cg1) link the molecules into a dimer(Table 6).

Figure 5. ORTEP view of compound 10h with atom numbering scheme. Ellipsoids are drawn at the 30% probability level (arbitrary spheres for H atoms).

**Figure 6.** The packing diagram of compound **10h** view along the a axis (the dotted line representing C-H---Cl hydrogen bonding).

In conclusion, we have adopted two different methods to prepare some unsymmetrical disubstituted-1,2,4,5tetrazines **4a-d** and **10a-i**. The structures of **4a**, **10c**, **10d** and **10h** were analyzed by X-ray crystallography, and these X-ray data may be helpful to find out the potential drug-enzyme interactions between these compounds and some tumor receptors, which we are studying on.

## EXPERIMENTAL

Solvents and reagents were commercially available and used without further purification. Melting points were measured on an XRC-1 apparatus and are uncorrected. Infrared spectra were

recorded from KBr discs on a Nicolex FI-IR-170 instrument. <sup>1</sup>H NMR spectra were run on a Bruker AC400(400 MHz). Mass spectra were obtained on a HP5989A spectrometer at an ionising voltage of 70 eV by electron impact. Elemental analyses were performed on a ThermoFinnigan Flash EA 1112 instrument.

X-ray single diffraction was carried with Enraf-Nonius CAD-4 diffractometer by the Analysis center of Fu-Dan university. Data were collected and refined by CAD-4 EXPR- ESS. Program(s) used to solve and refine the structure were SHELXS97. Molecular graphics were solved by ORTEX. The software used to prepare material for publication was SHELXL 97.

General Procedure for the Synthesis of **4a-e** were according to the Lang's method [10].

**3-Phenyl-6-methyl-1,2,4,5-tetrazine** (**4a**). Red prism, yield: 22.0%. mp: 74~76 °C (74.5-76 °C [13]). IR (KBr, cm<sup>-1</sup>): 3050 (Ar-H), 2926 (CH<sub>2</sub>), 1402, 1361 (C=N), 1088. MS (m/z, %): 172 (M<sup>+</sup>, 12), 103 (100), 76 (16).

**3-(4-Methylphenyl)-6-methyl-1,2,4,5-tetrazine (4b).** Red prism, yield: 26.5%. mp: 116~118 °C (115~118 °C [10b]). IR (KBr, cm<sup>-1</sup>): 3056 (Ar-H), 2928 (CH<sub>2</sub>), 1404, 1381 (C=N), 1087. MS (m/z, %): 186 (M<sup>+</sup>, 25), 117 (100), 90 (32), 63(7).

**3-(4-Chlorophenyl)-6-methyl-1,2,4,5-tetrazine** (4c). Red prism, yield: 32.5%. mp: 142~144 °C (143~145 °C [10a]). IR (KBr, cm<sup>-1</sup>): 3049 (Ar-H), 2980 (CH<sub>2</sub>), 1405, 1364 (C=N), 1093. MS (m/z, %): 206 (M<sup>+</sup>, 15), 136 (100), 102 (25), 75(10).

**3-(4-Methoxyphenyl)-6-methyl-1,2,4,5-tetrazine** (4d). Red prism, yield: 20.2%. mp: 103~105 °C (103~106 °C [10a]). IR

(KBr, cm<sup>-1</sup>): 3056 (Ar-H), 2985 (CH<sub>2</sub>), 1401, 1360 (C=N), 1088. MS (m/z, %): 202 (M<sup>+</sup>, 35), 133 (100), 103 (24), 89(28), 63(7).

General Procedure for the Synthesis of 10a-i. Under a N<sub>2</sub> atmosphere, 85% hydrazine hydrate (10 mL, 170 mmol) was added dropwise to an anhydrous ethanol solution (15 mL) of p-substituted benzyl cyanide (25 mmol) 8a-i and p-substituted benzonitrile (25 mmol) 7a-i at 298 K with existing sulfur powder (0.8 g, 25 mmol). After refluxing for 3 h, the mixture was cooled to room temperature and the resulting yellow solid product was collected by filtration. The solid product was then dissolved in diethyl ether (15 mL); to this solution was added 10 mL aqueous solution of sodium nitrite (1.0 g, 14 mmol) and was then added dropwise of 8 mL aqueous solution of acetic acid (0.9 g, 14 mmol). After standing for 4 h, the purple precipitate was collected and washed with cold anhydrous ethanol (5 mL), which was then chromatographed on a silica gel column using cyclohexane-dichloromethane (V/V, 4:1) as the eluent. The first eluting material, a pink crystal, was 3,6-di(p-substituted phenyl)s-tetrazine. The second one, a red crystal, was 3-(p-substituted phenyl)-6-(p-substituted benzyl)-s-tetrazine 10a-i; the third one, a red crystal, was 3,6-di(p-substituted benzyl)-s-tetrazine.

Crystal Structure Determination. Single-crystal X-ray stucuture determination were made on crystal of molecule 4a, **10c-d** and **10h**. Data collection for the block-shaped single crystals of 4a, 10c-d and 10h was performed on a Bruker CCD system with graphite monochromated Mo K $\alpha$  radiation ( $\lambda$ = 0.71073 Å) at 293 K. The model type of the diffractometer was CCD area detector. The sizes of the crysrals used for data collection were 0.25×0.20×0.15 mm<sup>3</sup> for 4a, 0.25×0.20×0.20 mm<sup>3</sup> for **10c**, 0.30×0.25×0.20 mm<sup>3</sup> for **10d**, and 0.25×0.20 ×0.15 mm<sup>3</sup> for **10h**. The structure was solved by direct methods and refined on F<sup>2</sup> using SHELXTL software. Anisotropic thermal parameters were applied for all the non-hydrogen atoms. All hydrogen atoms were positioned geometrically and refined as riding, with C-H distances of 0.97(2) Å and with  $U_{iso}(H)=1.2Ueq(C)$ . Crystallographic parameters and agreement factors are contained in Table 4. CCDC-634552, 621205, 642406 and 642405 contain the supplementary crystallographic data for this paper. These data can be obtained free of charge at www.ccdc.cam.ac.uk/conts/retrieving.html from the or Cambridge Crystallographic Data Centre, 12 Union Road, Cambridge CB2 1EZ, UK [Fax: +44-1223/336-033; Email: depoist@ccdc.cam.ac.uk].

Found: C, 68.78; H, 5.13; N, 20.06.

**3-Phenyl-6-(4-chlorobenzyl)-1,2,4,5-tetreazine (10c).** Red prism, yield: 2.8 g. mp: 143~145°C. IR (KBr, cm<sup>-1</sup>): 3054 (Ar-H), 2937 (CH<sub>2</sub>), 1384 (C=N), 1088, 740 (Ar-Cl). <sup>1</sup>H NMR

 $(CDCl_3, ppm) \ \delta 8.58 \ (d, 2 \ H, J = 6.8 \ Hz), 7.57-7.63 \ (m, 3 \ H, Ar-H), 7.40 \ (d, 2 \ H, J = 8.0 \ Hz), 6.87 \ (d, 2 \ H, J = 8.0 \ Hz), 4.65 \ (s, 2 \ H). \ MS \ (m/z, \%): 282 \ (M^+, 4), 151 \ (33), 116 \ (82), 103(100), 89 \ (14), 75 \ (21). \ Anal. \ Calcd. \ for \ C_{15}H_{11}N_4Cl \ (282.07): \ C, 63.72; \ H, 3.92; \ N, 19.82. \ Found: \ C, 63.68; \ H, 3.84; \ N, 19.80.$ 

**3-[4-(Trifluoromethyl)phenyl]-6-benzyl-1,2,4,5-tetreazine** (**10d**). Red needles, yield: 1.9 g. mp: 135~136°C. IR (KBr, cm<sup>-1</sup>): 3071 (Ar-H), 2950 (CH<sub>2</sub>), 1328 (C=N), 1123 (CF<sub>3</sub>), 1091. <sup>1</sup>H NMR (DMSO-d<sub>6</sub>, ppm)  $\delta$  8.66 (d, 2 H, J = 8.4 Hz), 8.04 (d, 2 H, J = 8.4 Hz), 7.28-7.44 (m, 5 H,Ar-H), 4.71 (s, 2 H). MS (m/z, %): 316(M<sup>+</sup>, 5), 297 (4), 117 (62), 152 (22), 117 (100), 102 (8), 90 (35), 75 (8).*Anal.* Calcd. for C<sub>16</sub>H<sub>11</sub>N<sub>4</sub>F<sub>3</sub> (316.28): C, 60.76; H, 3.51; N, 17.71. Found: C, 60.79; H, 3.37; N, 17.69.

**3-[4-(Trifluoromethyl)phenyl]-6-(4-methoxybenzyl)-1,2,4, 5-tetreazine (10e).** Red needles, yield: 1.6 g. mp: 137~138°C. IR (KBr, cm<sup>-1</sup>): 3071 (Ar-H), 2958 (CH<sub>2</sub>), 2837 (CH<sub>3</sub>), 1328 (C=N), 1112 (CF<sub>3</sub>), 1090. <sup>1</sup>H NMR (CDCl<sub>3</sub>, ppm)  $\delta$ 8.70 (d, 2 H, J = 8.8 Hz), 7.84 (d, 2 H, J = 8.8 Hz), 7.38 (d, 2 H, J = 8.8 Hz), 6.88 (d, 2 H, J = 8.8 Hz), 4.65 (s, 2 H), 3.78(s, 3 H). MS (m/z, %): 346 (M<sup>+</sup>, 5), 317 (10), 171 (60), 145 (45), 97 (60), 72 (80). C<sub>17</sub>H<sub>13</sub>N<sub>4</sub>F<sub>3</sub>O (346.31): C, 58.96; H, 3.78; N, 16.18. Found: C, 58.78; H, 3.53; N, 15.94.

**3-[4-(Trifluoromethyl)phenyl]-6-(4-chlorobenzyl)-1,2,4,5-tetreazine (10f).** Red needles, yield: 2.2 g. mp: 140~142 °C. IR (KBr, cm<sup>-1</sup>): 3071 (Ar-H), 2950 (CH<sub>2</sub>), 1326 (C=N), 1113 (CF<sub>3</sub>), 1090, 709 (Ar-Cl). <sup>1</sup>H NMR (DMSO-d<sup>6</sup>)  $\delta$ 8.66 (d, 2 H, J = 8.8 Hz), 8.05 (d, 2 H, J = 8.8 Hz), 7.47 (d, 2 H, J = 8.8 Hz), 7.42 (d, 2 H, J = 8.8 Hz), 4.73 (s, 2 H). MS (m/z, %): 350 (M<sup>+</sup>, 5), 171 (70), 151 (37), 116 (100), 102 (8), 89 (20), 75 (15). C<sub>16</sub>H<sub>10</sub>N<sub>4</sub>F<sub>3</sub>Cl (350.73): C, 54.79; H, 2.87; N, 15.97.Found: C, 54.87; H, 2.77; N, 15.86.

**3-(4-Chlorophenyl)-6-benzyl-1,2,4,5-tetreazine (10g).** Red flat crystal, yield: 1.8 g. mp: 157~158°C. IR (KBr, cm<sup>-1</sup>): 3087 (Ar-H), 2924 (CH<sub>2</sub>), 1384 (C=N), 1091, 737 (Ar-Cl). <sup>1</sup>H NMR (CDCl<sub>3</sub>, ppm)  $\delta 8.54$  (d, 2 H, J = 8.8 Hz), 7.57 (d, 2 H, J = 8.8 Hz), 7.47 (d, 2 H, J = 8.0 Hz), 7.27-7.37 (m, 3 H, Ar-H), 4.70 (s, 2 H). MS (m/z, %): 282 (M<sup>+</sup>, 12), 137 (100), 117 (98), 102 56), 90 (45), 75 (23). *Anal.* Calcd. for C<sub>15</sub>H<sub>11</sub>N<sub>4</sub>Cl (282.73): C, 63.72; H, 3.92; N, 19.82. Found: C, 63.65; H, 3.84; N, 19.81.

**3-(4-Chlorophenyl)-6-(4-methoxybenzyl)-1,2,4,5-tetreazine** (**10h).** Red flat crystal, yield: 1.5 g. mp:  $153 \sim 155^{\circ}$ C. IR (KBr, cm<sup>-1</sup>): 3089 (Ar-H), 2930 (CH<sub>2</sub>), 2850 (CH<sub>3</sub>), 1388 (C=N), 1093, 715 (Ar-Cl). <sup>1</sup>H NMR (CDCl<sub>3</sub>, ppm)  $\delta 8.53$  (d, 2 H, J = 8.8 Hz), 7.57 (d, 2 H, J = 8.8 Hz), 7.38 (d, 2 H, J = 8.4 Hz), 6.88 (d, 2 H, J = 8.4 Hz), 4.64 (s, 2 H), 3.80 (s, 3 H). MS (m/z, %): 312 (M<sup>+</sup>, 17), 147 (98), 137 (100), 116 (8), 102 (35), 91 (5), 77 (23). *Anal.* Calcd. for C<sub>16</sub>H<sub>13</sub>N<sub>4</sub>ClO (312.75): C, 61.44; H,4.19; N, 17.91. Found: C, 61.14; H, 4.13; N, 17.55.

**3-(4-Chlorophenyl)-6-(4-chlorobenzyl)-1,2,4,5-tetreazine** (**10i**). Red flat crystal, yield: 2.4 g.mp:  $181 \sim 183^{\circ}$ C. IR (KBr, cm<sup>-1</sup>): 3089 (Ar-H), 2937 (CH<sub>2</sub>), 1389 (C=N), 1094, 725 (Ar-Cl). <sup>1</sup>H NMR (CDCl<sub>3</sub>, ppm):  $\delta 8.52$  (d, 2 H, J = 8.8 Hz), 7.56 (d, 2 H, J = 8.8 Hz), 7.39 (d, 2 H, J = 8.4 Hz), 7.31 (d, 2 H, J = 8.4 Hz), 4.65(s, 2 H). MS (m/z, %): 316 (M<sup>+</sup>, 10), 151 (17), 137 (100), 116 (65), 102 (33), 89 (15),75 (15). *Anal.* Calcd. for C<sub>15</sub>H<sub>10</sub>N<sub>4</sub>Cl<sub>2</sub> (317.17): C, 56.50; H, 3.18; N,17.66. Found: C, 56.53; H, 3.22; N, 17.47.
