Abstract – A series of novel 5-[(substituted) methyl]-5-oxo-1,3,2λ⁴,5λ⁵-dioxaselenaphosphinan-2-ones (**4-17**) were successfully synthesized from tris(bromomethyl)phosphine oxide (**1**) and sodium selenite (**2**) to form the intermediate(**3**) which on further treatment with various alcohols/ thiols/ phenols/ aminoacid esters afforded the title compounds (**4-17**) and their structures were established by multinuclear NMR (¹H-, ¹³C- and ³¹P-) and mass spectral data. Their antimicrobial activity was evaluated and they exhibited promising antibacterial activity.

INTRODUCTION

Six-membered phosphorus heterocycles containing O, N as hetero atoms and P as P=O (S) have been the subject of research ever since cyclophosphamide [2-bis-2-(2-chloroethyl)amino]-2*H*-[1,3,2]-oxazaphosphorinane-2-oxide was discovered as an anti-cancer drug.^{1,2} Success of cyclophosphamide as an anti-cancer drug led to the synthesis of several [1,3,2]-oxazaphosphorinane derivatives. Schmidt *et al*³ synthesized two new compounds 2-[bis(2-chloroethyl)amino]-2,3-dioxo-7-thia-1-aza-2-phosphobicyclic[4.4.0]-decane and [4.3.0] nonane in their search for less toxic potential antitumor agents. 4-Carbonyl and 4-aryl cyclophosphamides were synthesized by Takamizawa⁴ and Shin⁵ respectively. 3-Cyclohexyl-6-(1,1-dimethyl)-3,4-dihydro-2-substituted-2*H*-[1,3,2]benzoxazaphosphorin-2-oxides were found to possess high antitumor activity.⁶ Their 4-bromophenyl and naphthyl substituted analogues also exhibited significant bioactivity.⁷ Even though several compounds related to six membered phosphorus heterocycles have been synthesized, none of them was found to possess satisfactory pharmacological properties. Hence the search continued for the development of potential bioactive molecule from six membered phosphorus

heterocycles. In the present investigation, we have made an attempt and synthesized first time successfully novel six-membered heterocyclic compounds containing Se and P. A series of novel 5-[(substituted)methyl]-5-oxo-1,3,2λ⁴,5λ⁵-dioxaselenaphosphinan-2-ones were successfully synthesized and their structures were established by elemental analyses, multinuclear NMR (¹H, ¹³C and ³¹P) and mass spectral data and their antimicrobial activity was evaluated.

RESULTS AND DISCUSSION

CHEMISTRY

To a cooled (10 °C) and stirred solution of sodium selenite **2** in 20 mL of dry THF, a solution of tris(bromomethyl)phosphine oxide **1** in 10 mL of dry THF was added over a period of twenty minutes. After completion of addition, the temperature of the reaction mixture was raised to room temperature and stirred for one hour to form the intermediate **3** and sodium bromide salt was removed. The filtrate was further treated with various alcohols/ thiols/ phenols/ amino acid esters in the presence of triethylamine to obtain the title compounds **4-17** as shown in Scheme 1 and Table 1.

Scheme 1

The title compounds exhibited P=O, Se=O and P-C stretching frequencies in the region(s) 1234-1254, 1201-1220 and 742-756 cm⁻¹ respectively.⁸⁻¹¹ In ¹H NMR spectra of **4-17** the chemical shifts of the aromatic protons showed complex multiplets⁹ in the region(s) 6.94-8.02 ppm. The methylene protons appeared as multiplets in the region(s) δ 2.54-5.02. The amino acid esters were observed in the expected region(s).^{8, 11} The ¹³C NMR chemical shifts for aromatic skeleton were observed in the range of 115.1-164.4 ppm. The methylene carbons which are directly linked to phosphorus experienced coupling with it and resonated as doublets in the region(s) 54.10-54.30 (d, *J* = 126-132 Hz).¹² The ³¹P NMR chemical shifts of title compounds were appeared in the region(s) 19.23-24.39 ppm as singlets.^{13,14}

BIOLOGICAL ACTIVITY

Antibacterial Activity

All the compounds **4-17** were screened for their antibacterial activity against the growth of *Staphylococcus aureus* and *Escherichia coli* at three concentrations^{15,16} of 100 µg / disc, 50 µg / disc and 25 µg / disc. All the compounds **4-17** showed moderate to high antibacterial activity against both the bacteria when compared with that of the standard. These results are presented in Table 2. The title compounds exhibited very significant antibacterial activity when compared to similar six-membered phosphorus heterocycles.¹⁷

^a Concentrations expressed in ppm**Antifungal Activity**

All the compounds **4-17** were tested for their anti fungal activity against the growth of *Aspergillus niger* and *Helminthosporium oryzae* at three concentrations 100 µg / disc 50, 25 µg/disc.¹⁸ When compared with the reference compound Griseofulvin, the title compounds exhibited moderate to high activity against the growth of both the fungi at three different concentrations. The results are furnished in Table 3. Compounds **4-17** showed very promising antifungal activities when compared to similar six-membered phosphorus heterocycles.^{17,19}

EXPERIMENTAL

Chemicals were obtained from Sigma-Aldrich, used as such without further purification. All solvents (AR or extra pure grade) used for spectroscopic and other physical studies were further purified by literature methods. All operations were performed under nitrogen atmosphere using standard glasswares. Melting points were determined using a calibrated thermometer by Guna Digital Melting Point apparatus. Elemental analyses were performed by Thermo Finnigan Flash EA 1112 at University of Hyderabad, Hyderabad. IR Spectra were recorded with Nicolet 380 FT-IR spectrophotometer. ¹H and ¹³C NMR

spectra were recorded as solutions in DMSO- d_6 on a Bruker AMX 400 MHz spectrometer operating at 400 MHz for ^1H , 100 MHz for ^{13}C , 161.9 MHz for ^{31}P and 76.2 MHz for ^{77}Se . The ^1H and ^{13}C chemical shifts were referenced to tetramethylsilane, ^{31}P chemical shifts to 85% H_3PO_4 and ^{77}Se Chemical shifts were referenced to dimethylselenium in CFCl_3 . LC mass spectra were recorded on a Jeol SX 102 DA / 600 Mass Spectrometer.

Tris(bromomethyl)phosphine oxide (1):

Tris(bromomethyl)phosphine oxide (1) was prepared by following the literature procedure.²⁰

5-[(1-Bromo)methyl]-5-oxo-1,3,2 λ^4 ,5 λ^5 -dioxaselenaphosphinan-2-one (3).

To a cooled (10 °C) and stirred solution of sodium selenite (2, 0.86 g, 0.005 mole) in 50 mL of dry THF, a solution of tris(bromomethyl) phosphineoxide (1, 1.43 g, 0.005 mole) in 15 mL of dry THF was added dropwise over a period of 20 min. After completion of the addition, the temperature of the reaction mixture was raised to room temperature and stirred for 1 h to form 5-[(1-bromo)methyl]-5-oxo-1,3,2 λ^4 ,5 λ^5 -dioxaselenaphosphinan-2-one 3. After completion of the reaction, sodium bromide was separated by filtration and the solvent was removed from the filtrate in a rota-evaporator. Then the resulted crude product was recrystallized from 2-propanol to obtain the compound-3. The progress of the reaction was judged by the TLC analysis. Yield: 69% (1.01 g), ^1H NMR (DMSO- d_6) δ : 3.68 (m, 4H, P-CH $_2$ -O-), 3.34 (m, 2H, P-CH $_2$ -Br). LCMS (%): 295 [M^+] (100), 297 [$\text{M}+2$] (97).

5-[(4-Nitrophenoxy)methyl]-5-oxo-1,3,2 λ^4 ,5 λ^5 -dioxaselenaphosphinan-2-one (4).

To the intermediate 3 (1.01 g, 0.003 mole), *p*-nitrophenol (0.42 g, 0.003 mole) in dry THF (10 mL) was added in the presence of triethylamine at 10-15 °C over a period of 30 min. After the addition, temperature of the reaction mixture was slowly raised to 30-35 °C and continued stirring. The progress of the reaction was monitored by the TLC analysis (EtOAc: hexane 1:2). After completion of the reaction, Et $_3\text{N}$:HBr was separated by filtration and the solvent was removed from the filtrate in a rota-evaporator. The resulting crude product was recrystallized from 2-propanol to obtain pure compound of 4. Yield 1.18 g, 67%; mp 161-163 °C. The same procedure was adopted for the preparation of other compounds 5-17.

Anal. Calcd: for C₁₃H₁₈NO₆PSe; C 39.61, H 4.60, N 3.55. Found: C 39.57, H 4.59, N 3.52%. LCMS (%): 394 [M⁺].

5-[(Phenyl glycine methyl ester)methyl]-5-oxo-1,3,2λ⁴,5λ⁵-dioxaselenaphosphinan-2-one (13).

Yield 70%, mp 174-176 °C. $[\alpha]_D^{25}$ -122.5°; IR (KBr): $\nu_{\max}$ 3404 (NH), 1687 (C=O), 1252 (P=O), 1210 (Se=O), 749 cm⁻¹(P-C_{alip}). ⁷⁷Se NMR (CDCl₃) δ : 1307. ³¹P NMR (85%, H₃PO₄) δ : 19.48. ¹H NMR (DMSO-*d*₆) δ : 7.09-7.49 (m, 5H, Ar-H), 4.69 (q, 1H, NH), 4.07 (m, 4H, P-CH₂-O-), 3.62 (m, 2H, P-CH₂-NH), 3.68 (s, 3H, O-CH₃), 2.29 (d, *J* = 10.2 Hz, 1H, CH-CO). ¹³C NMR: δ 54.2 (d, *J* = 126 Hz) C₄ and C₆, 55.1 (d, *J* = 130 Hz) C₇, 67.6 C₉, 172.5 C₁₀, 62.1 C₁₁, 135.7 C₁¹, 129.9 C₂¹ and C₆¹, 129.0 C₃¹ and C₅¹,

127.8 C₄¹ Anal. Calcd: for C₁₂H₁₆NO₆PSe: C 37.91, H 4.24, N 3.68. Found: C 37.85, H 4.23, N 3.64%. LCMS (%): 380 [M⁺].

5-[(Proline ethyl ester)methyl]-5-oxo-1,3,2λ⁴,5λ⁵-dioxaselenaphosphinan-2-one (14).

Yield 68%, mp 168-170 °C. $[\alpha]_D^{25}$ -119.3°; IR (KBr): $\nu_{\max}$ 1687 (C=O), 1237 (P=O), 1214 (Se=O), 756 cm⁻¹(P-C_{alip}). ⁷⁷Se NMR (CDCl₃) δ : 1312. ³¹P NMR (85%, H₃PO₄) δ : 24.39. ¹H NMR (DMSO-*d*₆) δ : 7.07-7.48 (m, 5H, Ar-H), 4.07 (m, 4H, P-CH₂-O-), 3.62 (m, 2H, P-CH₂-NH), 3.69 (s, 2H, O-CH₂-Ar), 2.29 (d, *J* = 10.2 Hz, 1H, CH-CO), 1.91-2.02 (m, 2H, CH₂), 1.64-1.79 (m, 2H, CH₂), 2.02-2.21 (t, 2H, CH₂). ¹³C NMR δ : 54.2 (d, *J* = 128 Hz) C₄ and C₆, 55.2 (d, *J* = 132 Hz) C₇, 66.8 C₉, 29.8 C₁₀ 22.7 C₁₁, 57.6 C₁₂, 171.6 C₁₃, 63.1 C₁₄, 135.8 C₁¹, 129.8 C₂¹ and C₆¹, 129.1 C₃¹ and C₅¹, 127.6 C₄¹. Anal. Calcd: for C₁₅H₂₀NO₆PSe: C 42.87, H 4.80, N 3.33 Found: C 42.82, H 4.77, N 3.30 %. LCMS (%): 420 [M⁺].

5-[(Tryptophan methyl ester)methyl]-5-oxo-1,3,2λ⁴,5λ⁵-dioxaselenaphosphinan-2-one (15). Yield 69%, mp 178-180 °C. $[\alpha]_D^{25}$ -116.4°; IR (KBr): $\nu_{\max}$ 3396 (NH), 1677 (C=O), 1248 (P=O), 1217 (Se=O), 747 cm⁻¹(P-C_{alip}). ⁷⁷Se NMR (CDCl₃) δ : 1318. ³¹P NMR (85%, H₃PO₄) δ : 24.27. ¹H NMR (DMSO-*d*₆) δ : 10.21 (br s, 1H, Ar-NH), 6.94-7.67 (m, 5H, Ar-H), 4.72 (q, 1H, NH), 4.07 (m, 4H, P-CH₂-O-), 3.69 (t, 2H, CH₂-Ar), 3.62 (m, 2H, P-CH₂-NH), 3.68 (s, 3H, O-CH₃), 2.29 (d, *J* = 10.2 Hz, 1H, CH-CO). M.F: C₁₅H₁₉N₂O₆PSe: Anal. Calcd: C 41.58, H 4.42, N 6.47. Found: C 41.54, H 4.40, N 6.43%. LCMS (%): 433 [M⁺].

5-[(Tryptophan ethyl ester)methyl]-5-oxo-1,3,2λ⁴,5λ⁵-dioxaselenaphosphinan-2-one (16).

Yield 71%, mp 169-171 °C. $[\alpha]_D^{25}$ -123.5°; IR (KBr): $\nu_{\max}$ 3392 (NH), 1678 (C=O), 1244 (P=O), 1220 (Se=O), 749 cm⁻¹(P-C_{alip}). ⁷⁷Se NMR (CDCl₃) δ : 1310. ³¹P NMR (85%, H₃PO₄) δ : 24.27. ¹H NMR (DMSO-*d*₆) δ : 10.11 (br s, 1H, Ar-NH), 6.94-7.67 (m, 5H, Ar-H), 4.72 (q, 1H, NH), 4.07 (m, 4H, P-CH₂-O-), 3.69 (t, 2H, CH₂-Ar), 3.62 (m, 2H, P-CH₂-NH), 2.29 (d, *J* = 10.2 Hz, 1H, CH-CO), 3.68 (q, 2H, O-CH₂-CH₃), 1.14 (t, *J* = 10.2 Hz, 3H, O-CH₂-CH₃). Anal. Calcd: for C₁₆H₂₁N₂O₆PSe: C 42.97, N 4.73, H 6.26. Found: C 42.94, N 4.70, H 6.25%. LCMS (%): 447 [M⁺].

5-[(Valine methyl ester)methyl]-5-oxo-1,3,2λ⁴,5λ⁵-dioxaselenaphosphinan-2-one (17).

Yield 70%, mp 177-178 °C. $[\alpha]_D^{25}$ -124.9°; IR (KBr): $\nu_{\max}$ 3399 (NH), 1678 (C=O), 1251 (P=O), 1210 (Se=O), 745 cm⁻¹(P-C_{alip}). ⁷⁷Se NMR (CDCl₃) δ : 1315. ³¹P NMR (85%, H₃PO₄) δ : 24.29. ¹H NMR (DMSO-*d*₆) δ : 4.07 (m, 4H, P-CH₂-O-), 3.62 (m, 2H, P-CH₂-NH), 4.72 (q, 1H, NH), 2.29 (d, *J* = 10.2 Hz, 1H, CH-CO), 3.68 (q, 2H, O-CH₃), 2.10 (m, 1H, CH(CH₃)₂), 1.17 (t, *J* = 7.2 Hz, 6H, CH(CH₃)₂). Anal. Calcd for C₉H₁₈NO₆PSe: C 31.23, H 5.24, N 4.05. Found: C 31.18, N 5.21, H 4.04%. LCMS (%): 346 [M⁺].
