

C-7

ALKYLATION OF BENZOTRIFLUORIDES

A. Marhold* and E. Klauke

Central Research Department Bayer AG, D-5090 Leverkusen (F.R.G.)

The alkylation of benzotrifluorides under Friedel-Crafts conditions will be described. In addition to this a detailed discussion of the range of application and in particular examples for controlling the isomer distribution will be given. Also the isomerisation of reaction products and the influence of temperature, pressure, solubility, substituents ect. is discussed.
