## PHOSPHABETAINES ON THE BASIS OF TRIPHENYLPHOSPHINE AND UNSATURATED DICARBOXYLIC ACIDS

Vladimir I. Galkin,<sup>a</sup> Yulia V. Bakhtiyarova,<sup>a</sup> Irina V. Galkina,<sup>a</sup> Rafael A. Cherkasov,<sup>a</sup> Arkady N. Pudovic,<sup>a</sup> Dmitry B. Krivolapov,<sup>b</sup> Airat T. Gubaidullin,<sup>b</sup> and Igor A. Litvinov<sup>b</sup> Kazan State University, Russia<sup>a</sup> and A. E. Arbuzov Institute of Organic and Physical Chemistry, Russia<sup>b</sup>

(Received July 29, 2001; accepted December 25, 2001)

Toxylic acid reacts with triphenylphosphine under soft conditions to give betaine  $\mathbf{I}$ , which is unstable and under heating or keeping eliminates  $CO_2$  with the formation of phosphonium salt  $\mathbf{II}$ .

SCHEME 1

Reaction of triphenylphosphine with fumaric acid carries out at high temperature only, and in this reaction the previously described triphenylphosphonium ethylcarboxylate, stabilized by the molecule of acetonitrile, has been directly obtained. The structure of all products has been strictly confirmed by the direct method of x-ray analysis.

This work is supported by the joint program of CRDF and Russian Ministry of Education "Basic Research & High Education" (grant REC 007) and Russian Fund for Basic Researches (grant 99-03-32880).
