We are the first to report that aluminum mercaptides or amides obtained in situ by the action of alkylthiols, arylthiols, or secondary amines with $(i\text{-Bu})_2\text{AlCl}$ in CH_2Cl_2 reacts with 2,7-octadienyl ethers in the presence of catalytic amounts of Cp_2ZrCl_2 or $\text{Pd}(\text{acac})_2 + 2\text{Ph}_3\text{P}$ at 35-40°C over 6-8 h to give the corresponding alkyl or aryl 2,7-octadienyl sulfides or tertiary amines in 65-96% yield.

Unsaturated sulfides or amines are not formed in the absence of catalyst or $(i\text{-Bu})_2\text{AlCl}$. Products (III) and (IV) are identified by comparison with authentic samples [1]. Phenyl 2E,7-octadienyl sulfide (I): n_D^{25} 1.5566. IR spectrum (ν , cm^{-1}): 3050, 1640, 1580, 1480, 1440, 1000, 975, 915, 740, 690.
