(22.I.80)

Summary

Compound **2** was rearranged on treatment with 2*N* NaOH to the 2-benzazepine-3-propanoic²⁾ acid **3**. Some aspects of the chemistry of this acid were studied.

Introduction. - We have reported the rearrangement of the spirolactone **1** to the methylaminonaphthalenone **2** which was cyclized by 2*N* HCl to give a spirolactam [1]. We now report the rearrangement of **2** by 2*N* NaOH to the 2-benzazepine-3-propanoic acid **3**. A few transformations of **3** are also discussed.

¹⁾ This work was presented at the 7th International Congress of Heterocyclic Chemistry at Tampa (Fla.) USA, August 12-17, 1979.

²⁾ See footnote 5) of the preceding paper.

Results. - On treatment with 2N NaOH compound **2** gave the benzazepine **3**, probably through the intermediates **4** and **5**. The $^1\text{H-NMR}$. spectrum of **3** shows a triplet at δ 5.7 ppm corresponding to the olefinic H-C(4)³.

Compound **3** was cyclized with polyphosphoric acid (PPA) to give a 4:1 ratio of the expected benzo[*e*]cyclopent[*b*]azepine-1,5-dione⁴ **9** and a product which presumably has structure **10**. The formation of **10** may be explained *via* **11** and **12**.

The NMR. spectrum of **9** is similar to that of **3** except for the absence of the signals corresponding to the olefinic proton and for a slight shift to lower field of the signals corresponding to the non-aromatic protons. The spectrum of **10**

³) A rigorous structural proof of **3** was provided by the transformation of both compounds **3** and **6** into the 2-benzazepine-3-propanamine⁵ **8** dihydrochloride, m.p. 230-233°.

⁴) Cyclopenta[*c*]2]benzazepine-1,5-dione.

⁵) 2-Benzazepine-3-propylamine.

presents a similar pattern, but the chemical shifts are quite different from those of **3** and **9**, benzylic protons appearing at δ 4.1 ppm instead of at 3.2 and 3.5 ppm as in the spectra of **3** and **9**, respectively. This difference is in agreement with the structure of **10**, being strained and planar in contrast to those of **3** and **9**. The four protons of the cyclopentenone ring in structure **9** appear between 2.3 and 2.9 ppm, these shifts being comparable with those of 3-pyrrolidino-2-cyclopenten-1-one, the protons of which appear between 2.25 and 2.70 ppm [2].

In the spectrum of the planar structure **10**, the corresponding four protons, which are included in a type of vinylogous succinimide, appear as two sets of multiplets: one centered at 2.6 ppm which accounts for 2 H-C(3) and the other at 3.5 for 2 H-C(4), the latter pair being deshielded by the indanone carbonyl group. Compared to the less rigid isomer **9**, compound **10** has, as would be expected, a much higher m.p. and a much lower solubility.

The 2,3,4,10-tetrahydrobenzo[e]cyclopent[b]azepine-1,5-dione⁶⁾ **9** was opened with MeOH/K₂CO₃ to give the methyl ester **13** which was then reduced with NaBH₄ to the benzylic alcohol **14**. The benzazepine **15** was obtained by cyclization of **14** in PPA.

We thank A. Horisberger for his excellent experimental assistance.

Experimental Part

For general remarks on ¹H-NMR. spectra see [3].

2,5-Dihydro-2-methyl-1-oxo-1H-2-benzazepine-3-propanoic acid⁷⁾ (**3**). Compound **2** (20 g, 0.077 mol) was suspended in 2N NaOH (400 ml) and MeOH (40 ml). The mixture was heated 3 h under reflux, then cooled, acidified and extracted with CHCl₃. The organic extract was dried and evaporated to dryness. The residue was crystallized from CHCl₃/ether to give 16.5 g (87%) of the acid **3**; m.p. 128–132°. - ¹H-NMR.: 3.3 (s, CH₃N); other signals discussed in the text.

C₁₄H₁₅NO₃ (245.3) Calc. C 68.6 H 6.2 N 5.7% Found C 68.3 H 6.4 N 5.7%

2,3,4,10-Tetrahydro-4-methyl-benzo[e]cyclopent[b]azepine-1,5-dione⁸⁾ (**9**) and 5-(1,3-Dihydro-1-oxo-2H-inden-2-yliden)-1-methyl-2-pyrrolidinone⁹⁾ (**10**). Compound **3** (50 g, 0.2 mol) was heated 45 min at 110° in PPA (750 g). The mixture was poured into water and extracted with CHCl₃, and the extract was dried and evaporated to dryness. The residue crystallized from CHCl₃/ether to give 7.5 g (16%) of **10**; m.p. 282–285°. - ¹H-NMR.: 3.2 (s, CH₃N), other signals discussed in the text.

The mother liquor was evaporated and treated with CHCl₃/petroleum ether to afford 35 g (76%) of **9**; m.p. 153–156°. - ¹H-NMR.: 3.5 (s, CH₃N), other signals discussed in the text.

C₁₄H₁₃NO₂ (227.3) Calc. C 74.0 H 5.8 N 6.2% Found C 74.0 H 5.9 N 6.2%

Methyl 2-[(2-(methylamino)-5-oxo-1-cyclopenten-1-yl)methyl]benzoate (**13**). Compound **9** (3 g, 13.2 mmol) was suspended in MeOH (200 ml) and a 50% aqueous solution of K₂CO₃ (20 ml) was added. The mixture was kept at RT. for 15 min, poured into water (500 ml) and extracted with CH₂Cl₂, and the extract was dried and evaporated. The residue was crystallized in ether at -20°; 2.4 g (70%) of **13**

⁶⁾ 2,3,4,10-Tetrahydrocyclopenta[c][2]benzazepine-1,5-dione.

⁷⁾ 2-Methyl-1-oxo-2,5-dihydro-2-benzazepine-3-propanoic acid.

⁸⁾ 4-Methyl-2,3,4,10-tetrahydrocyclopenta[c][2]benzazepine-1,5-dione.

⁹⁾ 5-(1-Oxo-1,3-dihydro-2H-inden-2-yliden)-1-methyl-2-pyrrolidinone.

were collected; m.p. 141°. – ¹H-NMR.: 3.95 (s, CO₂CH₃); 3.7 (s, CH₂ benzylic); 2.9 (d, CH₃N, collapses to s after D₂O exchange); 2.5 (s, CH₂CH₂).

C₁₅H₁₇NO₃ (259.3) Calc. C 69.5 H 6.6 N 5.4% Found C 69.4 H 6.7 N 5.5%

2-([2-(Hydroxymethyl)phenyl]methyl)-3-(methylamino)-2-cyclopenten-1-one (**14**). Compound **13** (18 g, 0.069 mol) was dissolved in diglyme (400 ml), NaBH₄ (10.5 g, 0.28 mol) was added and the mixture was heated to 80° for 8 h. After 6 h at RT. the volume of solvent was reduced under reduced pressure, water was added and the mixture extracted with CHCl₃, and the extract was dried and evaporated to dryness. The residue crystallized from CHCl₃/ether to give 6.75 g (42%) of the benzylic alcohol **14**; m.p. 186–187°. – ¹H-NMR.: 4.7 (s, CH₂O); 3.5 (s, ArCH₂C=); 2.8 (d, CH₃N, collapses to s after D₂O exchange); 2.4 (s, CH₂CH₂).

C₁₄H₁₇NO₂ (231.3) Calc. C 72.7 H 7.4 N 6.1% Found C 72.7 H 7.4 N 6.1%

3,4,5,10-Tetrahydro-4-methyl-benzo[e]cyclopent[b]azepine-1(2H)one¹⁰⁾ (**15**). Compound **14** (6.6 g, 0.029 mol) was stirred in PPA (70 g) at RT. for 5 h. The mixture was then poured into cold H₂O, made alkaline with NaOH, extracted with CHCl₃, and the extract was dried and evaporated to dryness. The residue crystallized from hexane to give 5.2 g (85%) of **15**; m.p. 126–128°. – ¹H-NMR.: 7.3 (s, 4 arom. H); 5.2 (s, CH₂N); 3.8 (s, ArCH₂C=); 3.2 (s, CH₃N); 2.4 (s, CH₂CH₂).

C₁₄H₁₅NO (213.3) Calc. C 78.8 H 7.1 N 6.6% Found C 78.7 H 7.0 N 6.6%
