THE PHOSPHORYLATION OF ALKENES PROMOTED WITH THE VIB GROUP METALS' CARBONYL COMPLEXES

Rafael A. Cherkasov, Arcady I. Kuramshin, and Helen S. Kuramshina Kazan State University, Kazan, Russia

(Received July 29, 2001; accepted December 25, 2001)

The phosphonates can be prepared in the direct interaction of the dialkylphosphytes with alkenes, promoted with the VIB group metals' carbonyl complexes' derivatives. The catalytic effect is observed either when the alkene reacts with the organometallics forming π -complex or when dialkylphosphite reacts forming the active intermediate (II).

SCHEME 1

The catalytic yield of (I) is 40-80% according on the dialkylphosphite or 500-1000% on the hexacarbonylmetall(0) taken as catalyst.

This work is supported by the joint program of CRDF and Russian Ministry of Education, "Basic Research & High Education" (grant REC 007); and Russian Ministry of Education program, "The Investigations of the High School at the Frontier of the Science & Techniques" (grant 0.2.01.009).
