## New and Convenient Synthesis of Indeno[2,1-c]quinoline Derivatives

Mumtaz A. Quraishi\* and Som N. Dhawan

Department of Applied Chemistry, Institute of Technology, Banaras Hindu University, Varanasi 221 005, India

**2-Propanoylindane-1,3-dione (I)** was condensed with aniline and three isomeric toluidines to give the corresponding anils (IIa-d), which on treatment with polyphosphoric acid afforded the corresponding 6-ethylindeno[2,1-c]quinolin-7(7H)-ones (IIIa-d). The structures of these were established by elemental analyses and IR and <sup>1</sup>H NMR spectral data.

#### Introduction

The reported (1-4) biological activity of azafluorenes and their benzoanalogues (indenoquinolines) led to the elaboration of few synthetic procedures for building up of these aza hydrocarbons (5-11). However, the syntheses of indeno-

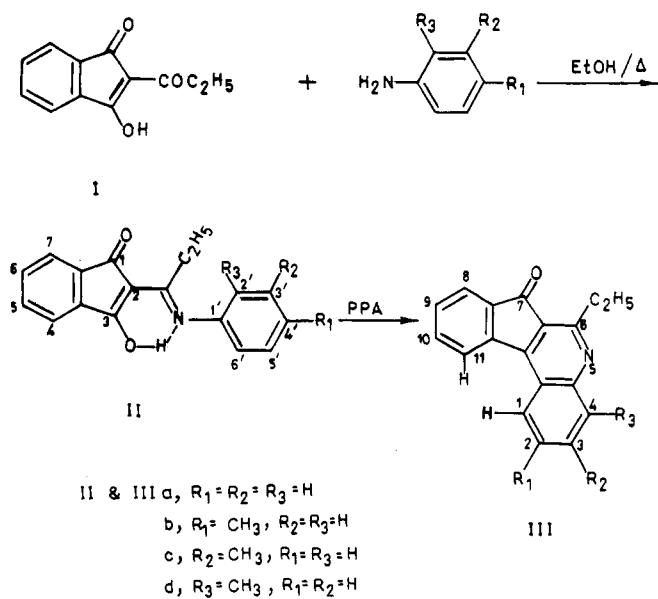

quinolines are either too lengthy or commence with substrates which are not readily available. Moreover, there appears to be no report on the synthesis of indeno[2,1-c]quinolines bearing an alkyl group at C-6. The present paper describes a convenient synthesis of indeno[2,1-c]quinolin-7(7H)-ones (IIIa-d) (Scheme I).

2-Propanoylindane-1,3-dione (I) upon refluxing with aniline and three isomeric toluidines in ethanol gave the corresponding anils (IIa-d) in excellent yields. The structures of these were confirmed by <sup>1</sup>H NMR spectral data (Table I). The IR spectrum of IIb shows absorptions at 1690 (C=O) and 1630 cm<sup>-1</sup> (C=N). <sup>1</sup>H NMR spectra of these compounds revealed the presence of enolic H (Table I). The anils (IIa-d) on treatment with polyphosphoric acid (PPA) yielded the corresponding 6-ethylindeno[2,1-c]quinolin-7(7H)-ones (IIIa-d). Such cyclization reactions catalyzed by PPA are reported in the case of  $\alpha$ -(1,3-dioxocyclohexyl-2-yl)ethyldeneanilines (12). The structures of these (IIIa-d) were established by <sup>1</sup>H NMR spectral data (Table I). The IR spectrum of IIIb exhibits absorption at

IIIc	115	45	51	1.35 (t, 3 H, J = 7 Hz, CH <sub>2</sub> -CH <sub>3</sub> ), 2.45 (s, 3 H, C-3-CH <sub>3</sub> ), 3.30 (q, 2 H, CH <sub>2</sub> ), 7.2-7.95 (m, 6 H, ArH), 8.05 (d, 1 H, J = 8 Hz, H-1)
IIId	142	48	50	1.37 (t, 3 H, J = 7 Hz, CH <sub>2</sub> -CH <sub>3</sub> ), 2.72 (s, 3 H, C-4-CH <sub>3</sub> ), 3.35 (q, 3 H, CH <sub>2</sub> ), 7.15-7.75 (m, 5 H, ArH), 7.90 (dd, 1 H, J = 8 and 2.5 Hz, H-11), 8.15 (dd, J = 8 and 2.5 Hz, H-1)

**Scheme I**

1700 cm<sup>-1</sup> indicative of a C=O group.

### Experimental Section

All the melting points are uncorrected. IR spectra in KBr disks were recorded on a Beckman IR-20 spectrophotometer. <sup>1</sup>H NMR spectra were recorded on R-32 Perkin-Elmer (90 MHz) spectrometer in deuteriochloroform using tetramethylsilane as an internal standard. The solvent system for TLC was benzene-ethyl acetate (8:2).

The elemental analysis data for all eight compounds appear in Table II.

**Materials.** Anilines were procured from BDH India. 2-Propanoylindan-1,3-dione (I) was prepared by the reported method (13).

**α-(1,3-Dioxolindan-2-yl)propylidineanilines (IIa-d).** A mixture of 2-propanoylindan-1,3-dione (1.2 g, 0.01 mol) and pure anilines (0.012 mol) in ethanol (30 mL) was refluxed for 3 h. The solid product obtained on cooling was crystallized from ethanol to afford green needles of anils (IIa-d) (Table I).

**6-Ethylindeno[2,1-c]quinolin-7(7H)-ones (IIIa-d).** The anil II (4 mmol) was added to a freshly prepared PPA (5 g of P<sub>2</sub>O<sub>5</sub> + 3 mL of H<sub>3</sub>PO<sub>4</sub>) and heated to 120 °C for 6 h, cooled,
