# Pyrimidine Analogues. Reaction of 1,3-Dimethyl-6-hydroxylaminopyrimidine-2,4-dione With Nitrophenyl Isothiocyanates

A. Siva Prasad, J. S. Sandhu\* and J. N. Baruah

Regional Research Laboratory, Jorhat 785006, India Received March 17, 1983

Reaction between 6-hydroxylaminouracil and nitrophenylisothiocyanates gave new purines which could be of biological interest.

## J. Heterocyclic Chem., 21, 267 (1984).

The synthesis of purine derivatives is still of considerable interest because of their pharmacological activity as well as interesting chemistry. Isothiocyanates have been reported to react with pyrimidine derivatives [1-4] to give 1:1 adducts which subsequently cyclised in presence of acid to give substituted purine derivatives. Recently [5] it has been reported that 1,3-dimethyl-6-hydroxylaminouracil (1) reacts with ethyl isocyanate (2) to yield 1:1 adduct 3 which finally gave 4 when refluxed with acetic anhydride.

It appears from a literature survey that reaction of 1 with isothiocyanates has not been investigated. Here we report our results when 1 was reacted with nitrophenyl isothiocyanates 5 [6] in the presence of catalytic amount of triethylamine, an exothermic reaction occurred to give 7 in almost quantitative yield which was crystallized from dimethylformamide. The product 7 did not undergo any change when refluxed with acetic anhydride for 2 hours. Thus ruling out the possibility of 1:1 linear adduct 6 formation.

The structural assignment is further confirmed by spectral as well as elemental analysis. The mass spectrum showed M<sup>+</sup> at m/e 333 and the nmr of 7a (90 MHz, TFA):  $\delta$  3.6 (s, 3H), 3.75 (s, 3H), 7.55 and 8.5 (dd, 4H). The general mass fragmentation pattern in these compounds is as follows: All the compounds 7a-c showed M<sup>+</sup> at m/e 333 which is a base peak. The ion at m/e (M<sup>+</sup> - 17) is obtained by the loss of one oxygen from the -NO<sub>2</sub> group and the loss of a proton from -SH group. In addition to the loss of -OH, there is also the loss of oxygen, which is due to simple elimination of oxygen, corresponding to m/e (M<sup>+</sup> - 16).

The expulsion of the -NO<sub>2</sub> group from the molecular ion of nitroaromatic compounds is well known. The relative abundance of this peak  $(M^+ - 46)$  in these pure in derivatives is 80%. After this fragmentation the loss of CH<sub>3</sub>NCO produces the ion at m/e  $(M^+ - 103)$  which is diagnostic of substituted pyrimidine and purine compounds [7].

Table I

				Elemental Analyses Found/(Calcd.)		
Compound						
No.	Mp °C (dec)	Yield %	Empirical Formula	С	H	N
7a	320	90	$C_{13}H_{11}N_5O_4S$	43.79	3.25	21.1
				(43.84)	(3.3)	(21.03)
7b	330	92	$C_{13}H_{11}N_{5}O_{4}S$	43.78	3.27	21.00
				(43.84)	(3.3)	(21.03)

<b>7b</b>	1710, 1660, 1610, 1330, 1275	3.6 (s, 3H), 3.755 (s, 3H), 7.7 and	333 M+, 317, 303, 288, 287,
		8.5 (m, 4H)	286, 230
<b>7c</b>	1710, 1660, 1610, 1330, 1275	3.6 (s, 3H), 3.74 (s, 3H), 7.4 and	333 M+, 317, 303, 288, 287,
		8.5 (m, 4H)	286, 248 (meta-stable peak), 230

## **EXPERIMENTAL**

Melting points were determined with a Büchi apparatus and are uncorrected. Infrared spectra were determined in pressed potassium bromide discs. The nmr spectra were recorded on a Perkin-Elmer 90 MHz instrument, TFA as solvent. Mass spectra were recorded at 70 eV using a direct inlet system.

### General Procedure.

1,3-Dimethyl-6-hydroxylaminouracil (1) (171 mg, 1 mmole) and p-nitrophenylisothiocayante (5a) (180 mg, 1 mmole) were taken together and a few drops of dry triethylamine was added to the mixture whereby an exothermic reaction took place which subsided after few minutes. The mixture was triturated in 10 ml of absolute alcohol and refluxed for one half hour, cooled and filtered. The precipitate was crystallized from dimethylformamide to give 7a (300 mg, 90% yield) mp 320° dec. Similarly compounds 7b and 7c were prepare. The yields, melting points, elemental analysis are given in Table I and spectral data in Table II.

### Acknowledgement.

Authors wish to thank Regional Research Laboratory, Hyderabad, India for mass spectral data and Dr. B. J. Wakefield of Salford University, U. K., for nmr spectra and helpful suggestions.
