A reaction is described of substituted 1*H*-pyrrole-2,3-diones (methyl 1-aryl-3-royl-4,5-dioxo-4,5-dihydro-1*H*-pyrrole-2-carboxylates) with N-alkyl- and N-aryl-substituted 3-amino-5,5-dimethyl-2-cyclohexen-1-ones providing 1-alkyl- and 1-aryl-susbtituted 6,6-dimethyl-2,4-dioxo-2,3,4,5,6,7-hexahydro-1*H*-indole-3-spiro-2'-(1'-aryl-3'-royl-4'-hydroxy-5'-oxo-2',5'-dihydro-1*H*-pyrroles) [1, 2]. The reaction proceeds as successive attacks of β-CH and NH groups of the enamino fragment of the carbocyclic enamines first on the carbon atom in the position 2 and then on the carbonyl group of the methoxycarbonyl moiety (substituent in the position 2) of pyrrolediones followed by methanol elimination.

In reaction of methyl 1-aryl-3-benzoyl-4,5-dioxo-4,5-dihydro-1*H*-pyrrole-2-carboxylates **Ia** and **Ib** with N-un-

substituted 3-amino-5,5-dimethyl-2-cyclohexen-1-one (**II**) taken in a ratio 1:1 performed by boiling in anhydrous benzene for 1–2 min (to the disappearance of the bright red color of initial compounds **Ia** and **Ib**) we unexpectedly obtained methyl 11-aryl-12-benzoyl-9-hydroxy-5,5-dimethyl-3,10-dioxo-8,11-diazatricyclo[7.2.1.0^{2,7}]dodec-2(7)-ene-1-carboxylates **IIIa** and **IIIb**. Spectral characteristics of compounds **IIIa** and **IIIb** are close to those of a model substituted 3,10,13-triazapentacyclo-[10.7.1.0^{1,10}.0^{4,9}.0^{14,19}]eicosa-4,6,8,14(19)-tetraene, whose structure was confirmed by XRD analysis [3].

Evidently the bridged compounds **IIIa** and **IIIb** formed by the addition of β-CH and NH₂ groups of the enamino fragment of carbocyclic enamine **II** to atoms C² and C⁴ respectively of monocyclic pyrrolediones **Ia** and **Ib**.

Ar = Ph (**a**), 4-ClC₆H₄ (**b**).

The described reaction is a new procedure for preparation of difficultly accessible functionalized bridged heterocyclic system of 8,11-diazatricyclo-[7.2.1.0^{2,7}]dodecane and also is the first example of nucleophilic [3+3]-addition of an enamine to monocyclic 1*H*-pyrrole-2,3-diones.

Methyl 12-benzoyl-9-hydroxy-5,5-dimethyl-3,10-dioxo-11-phenyl-8,11-diazatricyclo-[7.2.1.0^{2,7}]dodec-2(7)-ene-1-carboxylate (IIIa).

A solution of 1 mmol of compound **Ia** and 1 mmol of enamine **II** in 5 ml of anhydrous benzene was boiled for 1 min, then cooled, the separated precipitate was filtered off. Yield 79%, mp 179–180°C (from ethyl acetate). IR spectrum, ν , cm⁻¹: 3384 (NH), 3090 br (OH), 1751 (C=O), 1731 (COOMe), 1663 (C¹⁰=O), 1630 (COPh). ¹H NMR spectrum, δ , ppm: 0.73 s (3H, Me), 0.86 s (3H, Me), 1.91, 1.98 d.d (2H, C⁶H₂, *J* 16.1 Hz), 2.18, 2.29 d.d (2H, C⁴H₂, *J* 16.5 Hz), 3.79 s (3H, OMe), 5.15 s (1H, C¹²H), 6.75 s (1H, OH), 7.44 s (1H, NH), 7.12–7.82 group of signals (10H, 2Ph). Found, %: C 68.38; H 5.50; N 5.92. C₂₇H₂₆N₂O₆. Calculated, %: C 68.34; H 5.52; N 5.90.

Methyl 12-benzoyl-9-hydroxy-5,5-dimethyl-3,10-dioxo-11-p-chlorophenyl-8,11-diazatricyclo-[7.2.1.0^{2,7}]dodec-2(7)-ene-1-carboxylate (IIIb). Yield 75%, mp 183–184°C (from methanol). IR spectrum, ν , cm⁻¹: 3330 (NH), 3130 br (OH), 1756 (C=O), 1726

(COOMe), 1659 (C¹⁰=O), 1623 (COPh). ¹H NMR spectrum, δ , ppm: 0.72 s (3H, Me), 0.85 s (3H, Me), 1.90, 1.98 d.d (2H, C⁶H₂, *J* 16.3 Hz), 2.18, 2.30 d.d (2H, C⁴H₂, *J* 16.7 Hz), 3.79 s (3H, OMe), 5.11 s (1H, C¹²H), 6.81 s (1H, OH), 7.47 s (1H, NH), 7.16–7.82 group of signals (9H, Ph + C₆H₄). Found, %: C 63.77; H 4.91; Cl 6.99; N 5.54. C₂₇H₂₅ClN₂O₆. Calculated, %: C 63.72; H 4.95; Cl 6.97; N 5.50.

IR spectra of compounds synthesized were recorded on a spectrophotometer FMS-1201 from mulls in mineral oil. ¹H NMR spectra were registered on a spectrometer Bruker WP-400 in DMSO-*d*₆, internal reference TMS. The homogeneity of compounds obtained was proved by TLC on Silufol plates, eluent ethyl acetate, development in iodine vapor.

The study was carried out under financial support of the Russian Foundation for Basic Research (grant no. 07-03-96036).
