Copper-Promoted Cross-Coupling of Anilines with Alkyl Boronic Acids; General Procedure

$\text{Cu}(\text{OAc})_2$ (1.3-4 mmol) was added to a solution of aniline (1 mmol) and pyridine (3-4 mmol) in dioxane (5 mL), and the mixture was refluxed for 15 min. Boronic acid (1.3-4 mmol) was added, and the reaction mixture was allowed to react at reflux until no unreacted aniline was detected or for a maximum time of 10 h. It was allowed to reach r.t., poured into H_2O (25 mL) and extracted with EtOAc (40 mL). The organic layer was dried over Na_2SO_4 (anhydrous), filtered and concentrated. The crude residue was flash chromatographed on SiO_2 using EtOAc-hexanes as eluent.
