

Here is our GMP cosmetic peptide workshop pics:

Introduction ---- Acetyl octapeptide-3

Acetyl octapeptide-3, also known as acetylglutamyl-seven peptide-3, is an extended analog acetyl octapeptide of the hexapeptide aquillin. Since the anti-wrinkle oligopeptide is a scientifically rationally designed anti-wrinkle active ingredient polypeptide based on modern biochemical mechanism, its efficacy is comparable to that of botulinum toxin type A, but it avoids the disadvantage that the botulinum toxin must be expensive to inject and use.

Benefits ---- Acetyl octapeptide-3

- Single component, sequence is clear
- Clear mechanism of action, good anti-wrinkle effect
- Small dosage, no toxic side effects
- High purity, single and controllable
- Small molecular peptide, easy to absorb skin
- Good compatibility with other cosmetic raw materials
- Low volatility

Specifications---- Acetyl octapeptide-3

- Appearance state: white or off-white amorphous powder, hygroscopic, soluble in water;
- Acetic acid content: $\leq 15\%$
- Moisture content: $\leq 8\%$
- Purity: $\geq 97\%$
- Storage conditions: $-20\text{ }^{\circ}\text{C}$ refrigerator sealed, shelf life 2 years

Packing specification: 1 gram, 5 grams, 10 grams, 100 grams

Recommended amount: 0.001-0.01%

Our Advantages---- Acetyl octapeptide-3

Leading peptide manufacturers in China

High Technology Enterprise Award

GMP standard workshop

High purity cosmetic peptide

Competitive copper peptide price

Acetyl Hexapeptide-8 available from stock
