Product name: Hot sale Carbazochrome/adrenochrome CAS 69-81-8

Carbazochrome CAS:69-81-8 is an antihemorrhagic, or hemostatic, agent that will cease blood flow by causing the aggregation and adhesion of platelets in the blood to form a platelet plug, ceasing blood flow from an open wound.

Carbazochrome CAS:69-81-8 is orange crystal powder, an anti bleeding medicine or hemostatic medicine, mainly used as pharmaceutical intermediate.

Carbazochrome CAS:69-81-8 is a hemostatic agent that promotes clotting, preventing blood loss from open wounds. It is an oxidation product of adrenaline which enhances the microcirculatory tone. In the future this may prevent excessive blood flow during surgical operations and the treatment of hemorrhoids, but research on effectiveness and severity of side effects remains inconclusive.

Carbazochrome CAS:69-81-8 has been investigated for use in the treatment of non-surgical acute uncomplicated hemorrhoids in a mixture with Troxerutin, and this combination therapy demonstrated efficacy and safe tolerability either at a local or systemic level.

Product name	Carbazochrome
CAS NO	69-81-8
Color	red
MOQ	1kg
Storage condition	-20°C
